

OVERVIEW

INFORMATION

(A) GETTING STARTED

(B) TF-IDF

(C) BIG BANG

(D) CHECKMATE

CUSTOM TEST

QUESTIONS

ANNOUNCEMENTS (13)

Code	Meaning
WA	Wrong answer
OK	Correct answer
MLE	Memory limit exceeded
TLE	Time limit exceeded
RTE	Runtime error
NT	Testing skipped
CE	Compilation error
?	Result unavailable
-	Testing pending

Checkmate Q&A

19:20:44 16.03.

**Q:** Do we also take into the consideration that if pawns are in their starting positions, they can move two squares forward?  
**A:** You don't have to consider that case.

Others Grader downtime

00:54:57 16.03.

We are currently regrading previous submissions for better accuracy. This process will take next few hours. (ETA 4am CET, 16.3)

TF-IDF Q&A

22:05:08 15.03.

**Q:** Hi, I've resolved my RTE on TF-IDF (B) problem. The root of the problem was that I was developing this on Ubuntu, where python3 read the utf-8 encoded input files by default, while your Windows python runtime seems to be using different encoding for reading files by default. I've checked this on Windows, and it looks like it uses cp1252 to read files if encoding is not specified otherwise. Thank you for your help.  
**A:** Good job figuring it out! In case anyone else encounters this problem: we recommend using the codecs module from the Python standard library (<https://docs.python.org/3/library/codecs.html>) to read the input, with the encoding set to 'utf-8'. That guarantees correctness on all systems that we know of.

Others Extension of the deadline

19:09:10 15.03.

Due to technical difficulties experienced by some contestants, we'll be extending the deadline until March 17th 10AM.  
Good luck everyone!

Others Q&A

11:09:19 15.03.

**Q:** I have problem with testing. I've never gotten results for any of my submissions I've sent after 11PM.  
**A:** All submissions that are sent after 11PM yesterday have been graded. You should be able to see your score now.

Others Q&A

16:48:01 14.03.

**Q:** Is it okay to copy some parts of the code from the internet and leave a link in the comments? Thanks for the answer!  
**A:** You're allowed to use the code you find on sites like StackOverflow to solve parts of the task. If you do this please document where you got the code from. Please don't share code amongst each other since we will check for similarities.

TF-IDF TFIDF testing issue resolved

14:47:35 14.03.

All test examples should work now.

We added one additional requirement that you should follow (as stated in the problem):

Due to Petlja's infrastructure limitations, you should add this code to your solution before printing the output, in order for your results to be stored properly:

```
import sys
sys.stdout.reconfigure(encoding='utf-8')
```

TF-IDF

Q&A

14:25:22 14.03.

**Q:** When you say "the most important 10 words", if some very important word is repeated in sentence, do we count that word as one or we count every repetition in sentence?

**A:** The score is calculated based on the top 10 words in the sentence. They do not necessarily need to be distinct from each other. You are right that the phrasing could have been clearer - we'll update the statement.

TF-IDF

Technical difficulties

20:26:32 13.03.

Our infrastructure has an issue regarding saving solutions to output files in correct encoding (UTF8), which reflects on TF-IDF grading, as some characters in summary from Task2 will be different due to encoding mismatch.

We are working on the solution, and all your gradings will be rerun, once the issue is fixed. Your solution is not being graded correctly on Petlja at the moment, but we will award you correct points at the end of competition.

Others

Public and private datasets

11:54:02 13.03.

**Q:** I found a pattern in the public dataset. Can I expect it to be there in the private dataset?

**A:** Private datasets should have the same distribution as the public ones. If there are patterns in the public datasets they can be expected in the private ones.

TF-IDF

Issue with two test cases for the TF-IDF problem

01:04:59 13.03.

Due to a problem with the scoring infrastructure, it is currently impossible to solve test cases 2 and 7 for the TF-IDF problem. The test cases will be fixed tomorrow (Saturday) during the day.

All solutions that get submitted in the meantime will be automatically rerun after the fix is published.

TF-IDF

Q&A

00:25:13 13.03.

**Q:** Hey, I believe the public data set for the TF-IDF task is not available. I get the following error when trying to access it. The specified blob does not exist.

**A:** Try it now.

Others

Allowed python libraries

12:07:17 12.03.

The following libraries are allowed for solving every task:

- standard python library
- pillow
- imageio
- numpy
- nltk

No other libraries are installed on the machine. If you try to import a library not on the list you'll get RTE on all your task executions.
